Re: ***Supplemental Site Investigation Results***
Lower Main Meadow, Pogonip Open Space
501 Golf Club Drive
Santa Cruz, California 95060
Geotracker Global ID T10000018646

Dear Ms. Hanna:

This letter, prepared by RRM, Inc. (RRM), on behalf of the City of Santa Cruz Parks and Recreation Department (the City), presents a work plan to conduct supplemental site and surface water investigation for the referenced site (Figure 1). The County of Santa Cruz Environmental Health Division (CSCEHD) requested preparation of this document in an August 30, 2022 letter; the letter was issued in response to the August 24, 2022 *Revised Additional Soil Investigation Report and Human Health Screening Evaluation* prepared for the site by RMD Environmental Solutions (RMD). A brief background is presented below, followed by a description of the proposed scope of work.

BACKGROUND

The site is located in the Pogonip Open Space Preserve. The City leased approximately 9.5 acres in the lower meadow area of the preserve to the Homeless Garden Project (HGP), a non-profit organization, for conversion from recreational and natural open space to an agricultural and educational farm. While HPG was moving forward with the approved farm use, a historic skeet shooting use was discovered at the site and a November 19, 2019 *Phase I Environmental Site Assessment* identified the operation of a skeet and trap shooting range between the 1930s and 1950s with confirmed elevated lead and polycyclic aromatic hydrocarbons (PAHs) concentrations in shallow soil from shot and clay target deposition in soil.

A series of investigations completed from 2018 to 2022 found PAHs and select metals, primarily lead, in soil in proposed areas of use for the site. The investigations found the extent of other reported metals (antimony, arsenic, copper, and zinc) in soil to be delineated to the localized area of one soil sample in the west meadow (WM-DG-13-1.5') and do not constitute a significant release.

However, lead and PAHs have been identified as the contaminants of potential concern (COPCs) for the site, as elevated lead concentrations in soil have been reported in the west meadow, north orchard and east meadow areas; and elevated PAH concentrations in soil have been reported in the west meadow area (Figure 2). Attachment A includes figures with soil sample locations, and lead and PAH soil analytical data summarized in tables. Potential receptors for the site have been identified as unrestricted, commercial worker, recreational trail user, and unauthorized camper. Screening levels (SLs) for lead and PAHs in soil consistent with these receptors have been developed and are also presented in the tables in Attachment A.

Previous reports prepared for the site can be reviewed on the DTSC EnviroStor website (Database Number 60002874): https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=60002874, and at the State Water Resources Control Board GeoTracker website (Global ID T10000018646): https://geotracker.waterboards.ca.gov/profile_report?global_id=T10000018646.

Lead and PAHs associated with the historic shooting range activities have been identified and adequately delineated to the recreational trail user soil SLs. CSCEHD has required further delineation for lead and PAHs in areas where concentrations are above the unrestricted soil SLs and investigation of the seasonal surface water.

SCOPE OF WORK

RMD identified the following areas where lead concentrations in soil are not delineated to unrestricted receptor use SLs:

- Emma McCrary Trail Area, southeast of Boring T-5 and southwest of Boring T-7
- West Meadow Area, west of Boring WM-17

RMD identified the following area where PAH concentrations in soil are not delineated to unrestricted receptor use SLs:

- West Meadow Area, east of Boring WM-C-11

The scope of work further characterized the extent of lead and PAH concentrations above unrestricted receptor use soil SLs in the areas identified above, collected soil analytical data for development of a preliminary profile for soil disposal, investigated the presence of surface water at the site, and provided a preliminary characterization of surface water flowing through the site.

Pre-Field Activities

Prior to the start of work, RRM prepared a site-specific health and safety plan (SSHSP) for the proposed work; the SSHSP was reviewed and signed by all field personnel and kept on site for the duration of the project. All RRM personnel involved in conducting the field activities have satisfied the requirements of the Federal Occupational Safety and Health Administration (OSHA) 40-Hour Hazardous Waste Operations and Emergency Response Training.

Surface and Shallow Soil Sampling for Unrestricted Receptor Delineation

To further characterize the extent of lead and PAH concentrations, soil samples were collected from hand auger borings advanced to a total depth of approximately 2 feet below ground surface (bgs). The lithology, moisture content, and color of the soil along with the presence of any shot fragments were noted at each boring location. Two soil samples were collected from each boring; one "surface" sample from approximately ground surface to 6 inches bgs and one "shallow" sample from approximately 1.5 to 2 feet bgs. Soil samples were obtained by advancing the auger to the target depths and a clean brass sleeve was driven to the target sample depth. The samples were labeled and stored in a chilled cooler for transportation under chain-of-custody procedures to a California-certified analytical laboratory. The sampling equipment was decontaminated between uses using non-phosphate detergent and clean water.

The boring locations for delineation are shown on Figure 2 and described below with the laboratory analysis for the soil samples from each area.

- RRM-1 through RRM-3 - West Meadow Area, west of Sample Location WM-17: Three borings to the northwest, west, and southwest of WM-17; soil samples were analyzed for lead on a dry weight basis using EPA Method 6020.
- RRM-4 through RRM-6 - West Meadow Area, east of Sample Location WM-C-11: Three borings to the northeast, east, and southeast of WM-C-11; soil samples were analyzed for PAHs using EPA Method 8270C SIM.
- RRM-7 through RRM-9 - Emma McCrary Trail Area, southwest of Sample Location T-7: Three borings to the south, southwest, and west of T-7; soil samples were analyzed for lead on a dry weight basis using EPA Method 6020.
- RRM-10 through RRM-12 - Emma McCrary Trail Area, southeast of Sample Location T-5: Three borings to the southeast, south and southwest of T-5; soil samples were analyzed for lead on a dry weight basis using EPA Method 6020.

Soil Sampling for Soil Disposal Profiling

To develop a preliminary soil disposal profile, soil samples were collected from hand auger borings advanced to a total depth of approximately 2 feet bgs. Two soil samples were collected from each boring; one sample from approximately ground surface to 6 inches bgs and one sample from approximately 1.5 to 2 feet bgs. Soil samples were obtained from each boring as described above.

The boring locations for soil disposal profiling are shown on Figure 2. The analytical data from the borings are intended to characterize the highest concentrations of lead in soil for the removal area where they are located. For each area described below four borings were advanced; the samples from approximately 0-6 inches bgs were composited into one sample and the samples from approximately 1.5-2 feet bgs were composited into one sample. The composite samples were analyzed for CAM 17 metals using EPA Methods 6010B/7471A and STLC analysis for lead.

- East Meadow Area, in the vicinity of sample locations EM-7 through EM-11 and EM-21
- North Orchard Area, in the vicinity of sample locations NO-1, NO-3, WM-C-3, and WM-C-4

- West Meadow Area, in the vicinity of sample location WM-DG-13
- West Meadow Area, in the vicinity of sample locations B1E, B1N, WM-C-1, and WM-DG-1

Surface Water Investigation and Sampling

Seasonal wetlands occur where water saturates the ground for varying periods of time during the year and can be dry outside of the wet season. A potential 0.08-acre seasonal wetland has been identified in the northern portion of the west meadow.

For investigation and surface water sampling, the wetland was visited at a time during the wet season when surface water is most likely to be present. During several visits in March 2023, after two months of exceptional rainfall and immediately after storms, there was no visible standing water in the area identified as a potential wetland. There were no depressions or surface features that would allow standing water to accumulate observed within the area. Since standing water was not present, a soil sample was collected from 0-6 inches bgs in accordance with the methods described above and analyzed for CAM 17 metals using EPA Methods 6010B/7471A and PAHs using EPA Method 8270C SIM

Stream Sampling

A seasonal stream is intermittently present within the ravine area and flows generally west to east across the site. Grab samples of the surface water were collected from three accessible areas of the stream. A clean intermediate container was used to fill the sample containers. The intermediate container was lowered beneath the water surface and allowed to fill, avoiding surface debris and minimizing agitation. The filled intermediate container was then used to fill the sample containers. Surface water samples were analyzed for dissolved metals using EPA Method 6010B/7471A and PAHs using EPA Method 8270C SIM.

RESULTS

Surface and Shallow Soil Delineation

Surface and shallow soil results for lead are included in Table 1; sample locations are shown on Figure 2; certified analytical reports are included in Attachment B.

West Meadow Area: The area to the west of WM-17 was characterized by samples from RRM-1 through RRM-3. The maximum detection of lead in surficial/shallow samples was 25 mk/kg and the maximum concentration of lead in deeper samples was 6.7 mg/kg. All detections were below the unrestricted SL of 80 mg/kg.

West Meadow Area: The area east of Sample Location WM-C-11 was characterized by samples from RRM-4 through RRM-6. The maximum detection of lead in surficial/shallow samples was 38 mk/kg and the maximum concentration of lead in deeper samples was 8.3 mg/kg. All detections were below the unrestricted SL of 80 mg/kg.

Emma McCrary Trail Area: The area southwest of Sample Location T-7 was characterized by samples from RRM-7 through RRM-9. Lead was detected in shallow soil at concentrations of 160

mg/kg, 45 mg/kg, and 120 mg/kg. Lead was detected in deeper soil samples at concentrations of 8.2 mg/kg and 16 mg/kg. A deeper sample was not obtained at RRM-9 due the presence of water. Only the shallow samples from RRM-7 and RRM-9 exceed the unrestricted soil SL, but were lower than the commercial worker and trail use SLs. Both deeper samples were below the unrestricted use SL.

Emma McCrary Trail Area: The area southeast of Sample Location T-5 was characterized by samples RRM-10 through RRM-12. Lead was detected above the unrestricted use SL, but below the commercial worker and trail use SLs, at concentrations of 190 mg/kg/ 160 mg/kg, and 130 mg/kg, respectively. Lead was detected in the deeper samples at a maximum concentration of 36 mg/kg, below all SLs.

Wetland Sediment Sampling

Wetland sediment sampling results are included in Table 2; sample locations are shown on Figure 2; certified analytical reports are included in Attachment B.

The sediment sample collected from 0-0.5 ft bgs in the wetlands area contained lead at a concentration of 51 mg/kg, below all site SLs. The only metal detected above site SLs was arsenic at a concentration of 2.8 mg/kg (the unrestricted use and commercial worker SLs are 0.11 and 0.36 mg/kg, respectively). While the arsenic concentration is above the SLs, it is within published regional values for background arsenic concentrations.[1]

The sample was also analyzed for PAHs. The only PAH detected above the unrestricted SL was Dibenzo[a,h]anthracene at a concentration of 0.075 mg/kg which is below the commercial worker SL of 0.31 mg/kg and the trail use SL of 1 mg/kg. All PAH detection limits were lower than the unrestricted use SL.

Ravine Water Sampling

Ravine water sampling results are included in Table 3; sample locations are shown on Figure 2; certified analytical reports are included in Attachment B.

Water was observed flowing through a perennial stream within the ravine during the sampling period. Surface water appeared to begin several yards west of RV-1, flow generally west to east through the ravine, and flow into another perennial stream flowing south to north along the eastern property boundary. Sample RV-1 was located at the western edge of the ravine where surface water was first apparent, RV-2 was locate within the ravine, and RV-3 was located at the western edge of the ravine where it crosses Emma McCrary trail. Concentrations were compared to California maximum contaminant levels (MCLs) and the aquatic habitat environmental screening level (ESL).[2]

Lead was detected in samples RV-1 through RV-3 at concentrations of 10, 20, and 16 ug/l, respectively. These are all above the aquatic habitat ESL of 2.5 ug/l, and two of the samples are above the MCL of 15 ug/l. While concentrations vary between the three samples, they are generally low and there is no discernable gradient as water moves through the ravine.

[1] Kearney Foundation of Soil Science, Division of Agriculture and Natural Resources, University of California, *Background Concentrations of Trace and Major Elements in California Soils*, March 1996

[2] San Francisco Bay Regional Water Quality Control Board, *Environmental Screening Levels*, January 2019.

Cadmium and mercury were also detected above the aquatic habitat ESL (but not the MCL). Cadmium was detected above the ESL at concentrations of 0.25 and 0.53 ug/l from RV-2 and RV-3, respectively. Mercury was detected above the ESL at a concentration of 0.15 ug/l at RV-1. Cadmium and Mercury are not previously identified contaminants of potential concern (COPC)[3] and do not appear related to historical uses at the site.

Soil Disposal Profile Sampling

Composite soil samples were collected from four areas of the site as described in the previous section. Soil disposal profiling sampling results are included in Table 4; sample locations are shown on Figure 2; certified analytical reports are included in Attachment B. Composite sample results were generally consistent with historical results from the respective areas but were not compared to any SLs. The composite samples are intended only for future remediation planning use.

CONCLUSIONS AND RECOMMENDATIONS

Based on results of this and previous investigations:

- The West Meadow, North Orchard, and East Meadow areas are all delineated to below the unrestricted use SL. No further investigation is necessary.
- The Emma McCrary trail area is not delineated to unrestricted use. However, this area is slated for permanent trail and open space use and is delineated to well below trail user and commercial worker SLs, so no further delineation is necessary.
- Arsenic is present in the wetlands soil sample above screening levels, but the concentration is consistent with regional and State-wide background concentrations.
- Lead is present in all three ravine water samples and is likely the result of drainage from the West Meadow, North Orchard, and East Meadow areas.
- Cadmium and mercury, while detected in ravine water samples, are not CPOCs for the site and is likely the result of leaching from naturally occurring deposits.
- Future remediation will significantly reduce the amount of potentially contaminated runoff flowing into the ravine and will improve stream water quality. Water in the ravine area should be resampled once the remediation efforts are complete.

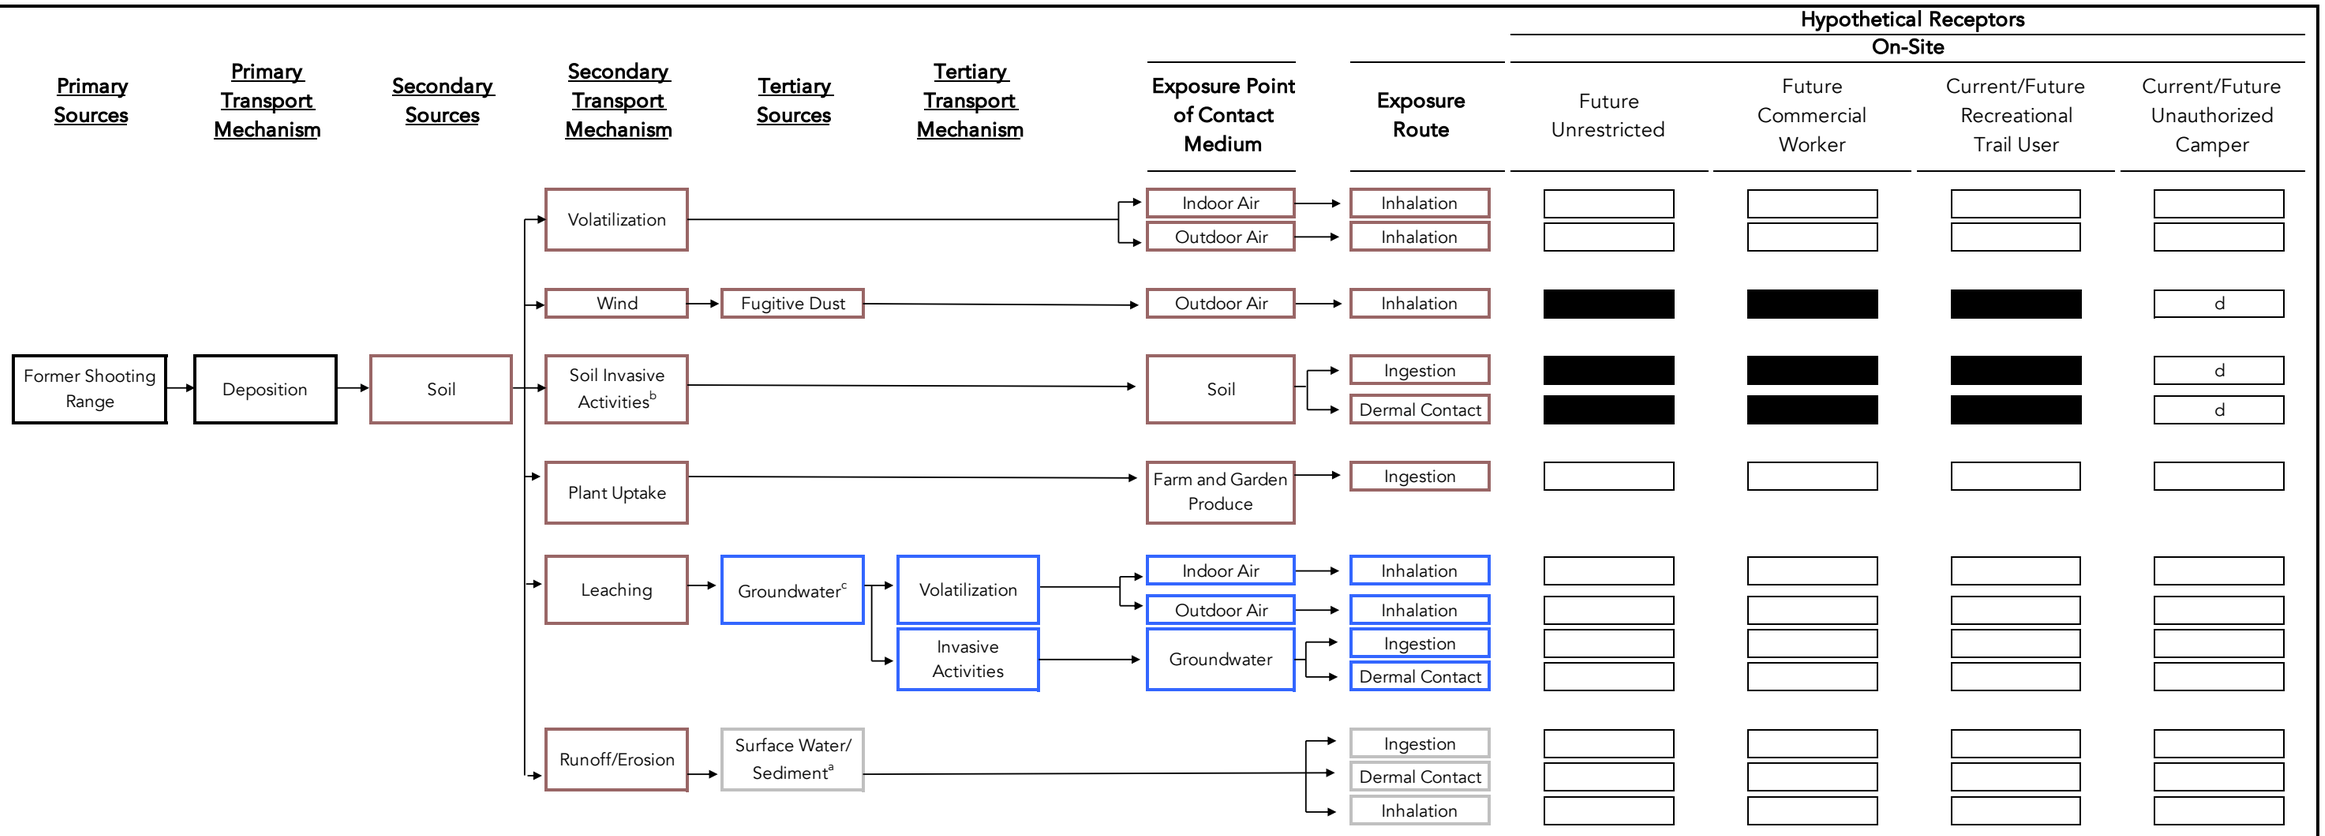
FIGURE 4



CSM components related to soil.
CSM components related to groundwater.
CSM components related to surface water.

Receptor likely to be exposed via this route, so pathway is considered potentially complete.
Receptor may be exposed via this route, so pathway is considered potentially complete; however, pathway is considered minor.
Pathway is incomplete, no further evaluation required.

[a] With the exception of the seasonal wetland, there are no identified surface water bodies within a one-half mile radius of the site.
[b] Surface invasive activities are not expected to extend beyond 2 feet bgs.
[c] Perched shallow groundwater supports seasonal wetlands and seeps. A 345 foot deep water supply well near the Pogonip clubhouse reported a depth to water of 128 feet below ground surface (bgs) in 1993. Due to depth to groundwater, it is not a media of concern at the site.
[d] Camping is prohibited at the Site and the exposure pathways for this receptor are incomplete due to the implementation of engineering controls to mitigate unauthorized camping at the Site.

Notes:
Soil samples sieved using No. 10 sieve and metals analyzed using USEPA Method 6020.
Analytes detected above laboratory reporting limit are **emboldened**.
Analytes detected above background level and Recreational Trail User Screening Level are highlighted.
XRF = X-Ray Fluorescence.
bgs = below ground surface.
ppm = parts per million.
mg/kg = milligrams per kilogram.
-- = Not analyzed.
O1 = The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.

[1] Lawrence Berkeley National Laboratory (LBNL, 2009), was used to establish an acceptable upper estimate background concentration for

[2] In order of priority, the screening level represents the Department of Toxic Substances Control (DTSC)-modified screening level (DTSC, 2022) followed by U.S. Environmental Protection Agency (USEPA) Regional Screening Level (RSL; USEPA, 2022).

[3] The Recreational Trail Use Screening Level was determined based on an evaluation of soil data collected from 2019-2020 and was described in the Preliminary Endangerment Assessment Report (RMD, 2020).

[4] Sample EM-35-2' initially reported a lead concentration of 5,810 mg/kg and was reanalyzed to confirm the result. The reanalyzed sample reported a lead concentration of 198 mg/kg.

Table 2
Polycyclic Aromatic Hydrocarbon Concentrations in Soil
Lower Main Meadow, Pogonip Open Space
Santa Cruz, California

Notes:
PAHs analyzed using USEPA Method 8270C-SIM.
Analytes detected above laboratory reporting limit are **emboldened**.
Analytes detected above Unrestricted (Residential) Screening Level are highlighted orange.
Analytes detected above Recreational Trail Use Screening Level are highlighted blue.
Analytes detected above Commercial Screening Level are underlined.
bgs = Below ground surface.
mg/kg = Milligrams per kilogram.
NE = Not Established.
PAHs = Polycyclic Aromatic Hydrocarbons.
SIM = Selective Ion Mode.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J3 = The associated batch QC was outside the established quality control range for precision.
J6 = The sample matrix interfered with the ability to make any accurate determination; spike value is low.
[1] The screening level represents the Department of Toxic Substances Control (DTSC)-modified screening level (DTSC, 2020).
[2] The Recreational Trail Use Screening Level was determined based on an evaluation of soil data collected from 2019-2020.

Notes:
Soil samples sieved using No. 10 sieve and metals analyzed using USEPA Method 6010B.
Analytes detected above laboratory reporting limit are **emboldened**.
Analytes detected above background level and Unrestricted (Residential) Screening Level are highlighted.
Analytes detected above background level and Commercial Screening Level are underlined.
bgs = Below ground surface.
mg/kg = Milligrams per kilogram.
- = Not analyzed.
B = The same analyte is found in the associated blank.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J6 = The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1 = The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.
[1] Lawrence Berkeley National Laboratory (LBNL, 2009), was used to establish acceptable upper estimate background concentrations for metals with the exception of arsenic. For arsenic, the background level represents the established background level for San Francisco Bay Region of 11 mg/kg (Duvergé, 2011).
[2] In order of priority, the screening level represents the Department of Toxic Substances Control (DTSC)-modified screening level (DTSC, 2020) followed by U.S. Environmental Protection Agency (USEPA) Regional Screening Level (RSL; USEPA, 2020).

Notes:				9.6	50.0	190.0	160.0		

Sample results reported in milligrams per kilogram (mg/kg).
Metals analyzed by USEPA Method 6010B.
TPH analyzed by USEPA Method 8015B.
TPH = total petroleum hydrocarbons.
Bolded value = exceedence of Residential ESL.
<0.24 = not detected above analytical laboratory Method Detection Limit (MDL).
--- = not analyzed or not established.
J = Estimated Value.
A01 = Detection and quantation limits were raised due to sample dilution.
A52 = Chromatogram not typical of diesel.
A57 = Chromatogram not typical of motor oil.
RWQCB ESL = San Francisco Bay Regional Water Quality Control Board Environmental Screening Level (January 2019, Rev 1).

Notes:
Sample results reported in milligrams per kilogram (mg/kg).
PAHs analyzed by USEPA Method 8270C.
Bolded value = exceedence of Residential ESL.
<0.0012 = not detected above analytical laboratory Method Detection Limit (MDL).
PAHs = Polycyclic Aromatic Hydrocarbons.
NA = not analyzed.
J = Estimated Value.
NE = ESL not established.
A01 = Detection and quantation limits were raised due to sample dilution.
RWQCB ESL = San Francisco Bay Regional Water Quality Control Board Environmental Screening Level (January 2019, Rev 1).

Notes:
Metals analyzed using USEPA Method 6010B.
Analytes detected above laboratory reporting limit are **emboldened**.
Analytes detected above Residential Screening Level are highlighted.
Background = Duverge, 2011. Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region. December.
HHRA Note 3 = DTSC, 2019. Human Health Risk Assessment (HHRA) Note Number 3. April.
USEPA RSLs = USEPA, 2020. Regional Screening Level (RSL) Summary Table (TR=1E-6, HQ=1). May.
DTSC = California Environmental Protection Agency, Department of Toxic Substances Control.
USEPA = United States Environmental Protection Agency.
bgs = Below ground surface.
mg/kg = Milligrams per kilogram.
- = Not analyzed.
B = The same analyte is found in the associated blank.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J6 = The sample matrix interfered with the ability to make any accurate determination; spike value is low.
O1 = The analyte failed the method required serial dilution test and/or subsequent post-spike criteria. These failures indicate matrix interference.

Notes:
PAHs analyzed using USEPA Method 8270C-SIM.
Analytes detected above laboratory reporting limit are **emboldened**.
Analytes detected above Residential Screening Level are highlighted.
Residential Screening Levels are based on HHRA Note 3 values.
bgs = Below ground surface.
mg/kg = Milligrams per kilogram.
NE = Not Established.
PAHs = Polycyclic Aromatic Hydrocarbons.
SIM = Selective Ion Mode.
HHRA Note 3 = DTSC, 2019. Human Health Risk Assessment (HHRA) Note Number 3. April.
DTSC = California Environmental Protection Agency, Department of Toxic Substances Control.
J = The identification of the analyte is acceptable; the reported value is an estimate.
J3 = The associated batch QC was outside the established quality control range for precision.
J6 = The sample matrix interfered with the ability to make any accurate determination; spike value is low.

	B-12	surface	**14.9**
		18"	**7**
Environmental Screening Levels (ESLs) **Residential / Commercial Land Uses (Construction Worker)**			**80 / 320 (160)**

Notes:

Environmental Screening Levels (ESLs): Regional Water Quality Control Board (San Francisco Bay Region) guideline document: *Screening for Environmental Concerns at Sites With Contaminated Soil and Groundwater* (Final version, 2019). The ESLs are intended to provide quantitative risk-based guidance on whether further assessment or remediation of contamination is warranted <**https://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/ESL/new/ESL_Summary_Tables_24Jan19_Rev1.pdf** >

158	= **green-shaded cell** indicates detected concentration exceeds the ESL threshold limit for a residential land use
320	= **red-shaded cell** indicates detected concentration exceeds the ESL threshold limit for a residential land use

CERTIFIED ANALYTICAL REPORTS

Date of Report: 03/17/2023

Matt Paulus

RRM, Inc.
2560 Soquel Avenue, Suite 202
Santa Cruz, CA 95062

Client Project:	IMK808
BCL Project:	Soil Samples - Dry weight
BCL Work Order:	2304623
Invoice ID:	B471672

Enclosed are the results of analyses for samples received by the laboratory on 3/7/2023. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Contact Person: Eli Velazquez
Client Service Rep

Authorized Signature

Certifications: CA ELAP #1186; NV #CA00014; OR ELAP #4032-001; AK UST101

RRM, Inc.
2560 Soquel Avenue, Suite 202
Santa Cruz, CA 95062

Reported: 03/17/2023 15:04
Project: Groundwaters
Project Number: IMK808
Project Manager: Matt Paulus

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A10	Detection and quantitation limits were raised due to matrix interference.
Q01	Sample precision is not within the control limits.
Q03	Matrix spike recovery(s) was(were) not within the control limits.

Date of Report: 04/18/2023

Matt Paulus

RRM, Inc.
2560 Soquel Avenue, Suite 202
Santa Cruz, CA 95062

Client Project:	IMK808
BCL Project:	Soil Samples - Dry weight
BCL Work Order:	2305048
Invoice ID:	B471976, B473946

Enclosed are the results of analyses for samples received by the laboratory on 3/10/2023. If you have any questions concerning this report, please feel free to contact me.

Revised Report: This report supercedes Report ID 1001411124

Sincerely,

Contact Person: Eli Velazquez

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A02	The difference between duplicate readings is less than the quantitation limit.
A10	Detection and quantitation limits were raised due to matrix interference.
Q01	Sample precision is not within the control limits.
Q02	Matrix spike precision is not within the control limits.
Q03	Matrix spike recovery(s) was(were) not within the control limits.
S09	The surrogate recovery for this compound was not within the control limits.
